Worked on by Dinesh Dammalapati -

Worked on server and handled the guesses from the clients, and fixed the errors while handling the threads and implemented tracking the categories and word guess which also checks for winning and losing of the game. Worked on test cases

Worked on by Akkem Huma Tejaswi -

Huma worked on client maximum guesses per category and checked if the client is making correct guesses or not in a limited guesses trial. Handled the winning situation of the client such as when the client guessed matches to the category provided(one word in each category).

NOTE - We both helped each other in fixing the errors most of the time and implementing the serializable class, tracking the clients moves and giving the response from the server is a time taking process so in these main parts we both use to work in a zoom meeting.
